

Chris Stefan

Senior AI Engineer | Production Agentic AI | Forward Deployed | Remote-Ready | Open to Contract

ABOUT

I started in Computer Science, moved into Finance & Business Analytics at McGill, and found my edge where the two converge: building AI that sophisticated, high-stakes users can trust and verify. I work end-to-end — I identify what matters, scope it, ship it, and iterate with the people who use it. I thrive in ambiguous environments and move quickly without sacrificing rigor. What drives me is production AI that genuinely matters: the work itself, the team, and the impact. EU citizen based in Italy; remote-ready; open to contract.

EXPERIENCE

Senior AI Engineer

Alpha Science · PSP Investments · Montreal, QC Sep 2022 – Aug 2026

- Owned the full stack of PSP's company-wide agentic AI platform for analysts and PMs: architecture, design documentation, and UI/UX from concept to deployment; feature development, SDK packaging & distribution, PR reviews, and ongoing maintenance — source-traced answers in daily research workflows.
- Alpha Science SDK:** wraps Databricks (Vector Search, SQL Warehouses, Genie Agents) & OpenAI (Responses + Files API), auto-auth via Databricks CLI & Azure Key Vault. Composable agent/workflow base-class framework on the firm's existing stack, proprietary tracing, inter-agent persistence, pre-built financial utility agents & skills; artifact export (Office docs & web pages), sub-agent delegation with to-do planning, and parallel tool execution.
- Virtual Analyst Platform:** custom chatbot UI with step-level tracing & observability (reasoning trace, web search, RAG retrieval, parallel tool execution, subagents), source traceability, structured data retrieval & manipulation with sandboxed analysis, live charting (Plotly/Dash/ECharts) & exportable dashboards, workflow launcher & scheduled tasks.
- Agile roadmap:** weekly-evolving priorities with rapid integration of emerging model and tooling capabilities into production. Each feature independently scoped, designed as an SDK tool, and surfaced through the platform from concept to deployment.
- Leadership:** direct collaboration with C-suite across all asset classes; mentored interns and juniors to ship production features independently; coached Alpha Science SDK users; platform demoed at the Databricks Data & AI Summit.

Agentic AI RAG Orchestration Azure AI Evals Observability

Analyst

Digital Innovation · PSP Investments · Montreal, QC Sep 2021 – Aug 2022

- Co-developed **Earnings Prediction Engine** (ML beat/miss pipeline, point-in-time data, Power BI); built alt-data pipeline with data profiling, cleaning & feature engineering for equity factor research; delivered POC analyses to drive stakeholder buy-in across asset class teams

Quant Strategy Alt Data ML Pipelines Power BI scikit-learn

Intern

Information Security · PSP Investments · Montreal, QC May 2021 – Aug 2021

- Enterprise risk framework implementation; automated risk assessment repository updates, improving data currency and reporting efficiency

Cybersecurity Risk Analysis

Business Analyst

Lunch à Porter · Montreal, QC Jun 2020 – Jun 2021

- SEO & A/B testing drove 2× online conversion rate; inventory analysis for data-informed merchandising decisions

SEO A/B Testing Shopify Lightspeed Analytics

PERSONAL PROJECTS

digithings.ai · GitHub ↗

Modular multi-agent AI toolkit — self-hosted infrastructure for RAG, agents, chat, and quant. LangGraph, LiteLLM, pluggable RAG, evals, Docker, MCP & Open WebUI, OpenClaw. Custom digithings applications; MIT; no vendor lock-in.

Olympus / digiquant · digiquant.io ↗

Public demonstration in finance: research → thesis → paper book. Olympus as the live-valued research book (Supabase, Next.js); Atlas & Hermes for scheduled research and timestamped signals; deterministic backtests. Paper and live execution are not claimed.

DataTap · datatap.stream/chat ↗

Production digichat embed on live product documentation — conversational RAG over solutions docs for end users.

Custom desk AI

Forward-deployed agentic layer on the desk's existing terminals and research stack. Source-traced answers; client retains full code ownership. Built as digithings applications.
